Students Tune Into Holiday Workshops

Sheldon College recently held Holiday Technology Workshops for students in Years 7 to 10. Students immersed themselves in the evolving worlds of programming, design, engineering, and radio technologies.

Sheldon College Years 7 to 10 students used satellite technologies, radio frequencies and cryptography to explore the science of securing secret messages and sent coded messages via radio frequencies to remote controlled devices. During the workshop, students investigated security of technologies, social and ethical issues associated with un-secured technologies and how to write "listening code" to access meteorology data.
